

**CMU-PT/HuMach/0004/2008-SINAIS - Sustainable Interaction via Social Networking,
Search and Context of Innovation in Services**

Characterization:

This work is located in the multidisciplinary area of human-computer interaction (HCI) and has three foci: the learning and use of sensors to detect and monitor the human behavior; the application of motivational theories to intentionally influence people's behavior, the use of design to investigate and resolve "complex problems" such as sustainability.
